## HI-TECH PRODUCTS OF THE FUTURE

**TODAY!**

# DEVOL

## ENGINEERING

*Larry Ward from the 971st DeVol Fighter Command (based out of Snohomish, WA) in a mock battle with the "Technician" Ted DeVol, who is flying a DeVol Suzuki fully equipped with production and prototype Component Protection. Without the ALLOY COMPONENT PROTECTION damage to many vital parts is inevitable.*

WORKS ONE-PIECE BAR CLAMP

# GUIDE TO DeVOL PRODUCTS

---

**WORKS ALLOY PIPE GUARD** Made from high quality, heavy gauge aluminum, these guards are enlarged stampings of the same shape as your bikes header pipe. They mount with stainless steel hose clamps via tabs incorporated onto the inside of the pipe guard. They look trick and protect your pipe like no universal-fit pipe guard can. So don't take a chance on lost horsepower due to a damaged exhaust pipe. Team Honda doesn't!

**WORKS ALLOY FRONT DISC GUARD** Manufactured by a process that work-hardens the leading edge allowing it to absorb heavy hits with no chance of wheel lock-up or damage to the disc rotor. They mount solidly in place. The aircraft-quality aluminum makes it lightweight and gives your bike that trick factory look.

**WORKS ALLOY REAR DISC GUARD** These are made from the same strong, lightweight aircraft-quality aluminum as our front disc guards. The leading edge is work-hardened, making it impervious to heavy blows. They are easy to install and mount solidly. Nothing else looks or protects like it.

**WORKS ALLOY BAR CLAMP** Machined from a solid billet of 6061 T6 aluminum, this one piece clamp allows the rubber mounts to do their job reducing vibration; but eliminates the problem of the flex that leaves the bars out of alignment after a crash. Most factories use this type of clamp on their works bikes, and for good reason, THEY WORK!

**WORKS ALLOY FRONT MASTER CYLINDER GUARD** Constructed of high quality, T6 aluminum, this is box-sectioned to cover the top, bottom, front and sides to protect from even small debris. It comes complete with all necessary mounting hardware for easy installation.

**WORKS ALLOY REAR MASTER CYLINDER GUARD** Designed to protect the entire master cylinder including the rod which mounts to the brake pedal. It will keep foreign objects from jamming or breaking the master cylinder, including your boot. Made from aircraft quality aluminum and comes with all mounting hardware.

**WORKS ALLOY RADIATOR "RAD" GUARD** This is the first product of its kind, designed to protect the radiator from side blow damage. Made of T6 aluminum and extremely light (less than 8 oz. per pair). They tuck away out of sight behind the shrouds and do not affect cooling flow. Only a fraction of the cost of new radiators and easy to install.

**WORKS ALLOY WATER PUMP GUARD** The leading edge is work-hardened allowing it to absorb unusual punishment. Unlike cage-type guards, it protects against small debris as well as large. It protects the front, bottom and side; mounts easily and solidly with included mounting hardware.

**WORKS ALLOY CHAIN GUIDE BRACKET** Made of aircraft quality T6 aluminum and designed to keep the chain aligned and on the sprocket where it belongs. Top riders use these because they can't afford anything but the best. Comes with all mounting hardware and is easily installed.
